Introduction

About this document

This Directions for use manual is a comprehensive guide designed to help you understand the capabilities and operation of your Spot Vision Screener VS100. The information in this manual includes all options available with the Spot Vision Screener. The applicability of some sections of this manual depends on the configuration of your particular device. Read this manual thoroughly before attempting to use the device.

The vision screener is a hand-held instrument with a video display on the rear of the unit that provides subject visualization and alignment. Video display also provides user interface functionality for data input and display. The vision screener provides visual and audible cues to attract subject’s attention and gaze. The device provides a fast data collect for easy evaluation of the most difficult pediatric subjects of limited compliance. Each screening provides simultaneous binocular assessment of the subject’s refraction, pupil size and gaze.

Intended use

The Spot Vision Screener is intended to produce optical images that can help identify refractive errors and ocular misalignments by detecting special light reflexes from each eye during screening. The Spot Vision Screener evaluates these light reflexes from the retina to estimate refractive error. It also estimates pupil size, pupil distance and eye gaze deviation. It is intended for use on subjects six months of age through adults.

Indications for use

The Spot Vision Screener is indicated for use by healthcare professionals or under the direction of a healthcare professional to screen or evaluate individuals for potential refractive errors associated with poor vision. This type of photoretinoscopy device is intended to help the healthcare professional assess whether the subject should be referred to an eye care specialist for further evaluation or simply be monitored at future screenings. This screening is not intended to replace a full eye examination.

Contraindications

The Spot Vision Screener has no known contraindications.
Symbols

For information on the origin of these symbols, visit [http://www.welchallyn.com/symbolsglossary](http://www.welchallyn.com/symbolsglossary) for the Welch Allyn symbols glossary.

### Documentation symbols

Consult directions for use (DFU). A copy of the DFU is available on this website. A printed copy of the DFU can be ordered from Welch Allyn for delivery within 7 calendar days.

**WARNING** The warning statements in this manual identify conditions or practices that could lead to illness, injury, or death.

**Caution** The caution statements in this manual identify conditions or practices that could result in damage to the equipment or other property, or loss of data. This definition applies to both yellow and black and white symbols.

### Power symbols

- ![Symbol](https://example.com/symbol1.png) Rated power input, DC
- ![Symbol](https://example.com/symbol2.png) Rechargeable battery
- ![Symbol](https://example.com/symbol3.png) Power on/off
- ![Symbol](https://example.com/symbol4.png) USB
- ![Symbol](https://example.com/symbol5.png) DC power input port, Center pin positive

### Miscellaneous symbols

- ![Symbol](https://example.com/symbol6.png) Not protected against the ingress of water.
- ![Symbol](https://example.com/symbol7.png) Non-ionizing electromagnetic radiation
- ![Symbol](https://example.com/symbol8.png) Manufacturer
- ![Symbol](https://example.com/symbol9.png) Reorder Number
- ![Symbol](https://example.com/symbol10.png) Product Identifier
- ![Symbol](https://example.com/symbol11.png) Serial Number
- ![Symbol](https://example.com/symbol12.png) Authorized Representative in the European Community
- ![Symbol](https://example.com/symbol13.png) Global Trade Item Number
Meets essential requirements of the European Medical Device Directive 93/42/EC

User Interface Symbols

- **Battery status/level indicator**: Battery charging
- **Wireless On/Off button**: Connected to the wireless network
- **Unknown network**: No IP address assigned by the router
- **Sound off**: Sound on
- **Continue**: Back
- **Exit**: Print job in progress

Shipping, storing, and environment symbols

- **This way up**: Keep Dry
- **Fragile**: Humidity limitation

Lithium ion battery
Warnings, cautions and notes

WARNING Risk of electric shock. All signal input and output (SIP/SOP) connectors are intended for connection of only other medical devices, medical systems or non-medical devices complying with IEC 60601-1, or other IEC standards appropriate to the device. For example, a printer connected via USB must comply with IEC 60950. Connecting additional unapproved devices to the device might increase chassis or subject leakage currents.

WARNING Risk of electric shock. No modification of this equipment is allowed.

WARNING Risk of electric shock. Do not open the device or attempt repairs. The device has no user-serviceable internal parts. Only perform routine cleaning and maintenance procedures specifically described in this manual. Inspection and servicing of internal parts shall only be performed by qualified service personnel. Attempt to modify this device may result in bodily harm and will void product warranty.

WARNING Risk of electric shock. Do not allow the subject to make contact with accessible conductive parts (DC adaptor output connector, power input connector and USB port). Additionally, you should not make contact with the subject and any accessible conductive parts at the same time.

WARNING To avoid a possible explosion, do not use the device in the presence of flammable anesthetics: mixtures containing air, oxygen, or nitrous oxide.

WARNING Risk of data loss. If a reboot is required during a system freeze, data loss, such as printer configuration and subject data, can occur.

WARNING Lithium ion battery. Risk of fire, explosion, and burns. Do not handle or disassemble the battery pack.

WARNING Use only accessories approved by Welch Allyn. Visit www.welchallyn.com. The use of any other accessories can result in inaccurate subject data, can damage the equipment, and can void your product warranty.

WARNING Injury risk and equipment damage risk. When charging the device, properly secure all DC transformer cords to minimize trip hazards.

WARNING Subject injury risk. Verify subject identity on the device after manual entry and before printing or transferring subject records.

WARNING False positive and false negative results may occur in a healthcare screening. Vision screening does not replace a complete eye examination by an ophthalmologist or optometrist.

WARNING The use of screening results for recommending therapy is reserved exclusively for eye care professionals.

WARNING The screening results may not be used directly for the prescription of corrective eyewear.
CAUTION The device contains high-quality, fragile parts. Do not subject it to physical shock.

CAUTION Do not use the wrist strap as a means to carry the device; it is not designed to carry the weight of the device.

CAUTION The device is not waterproof. If you accidentally drop it into liquid or liquid is spilled on the device, contact Welch Allyn Technical Support immediately. If minor water droplets are found on the device, wipe off with a soft dry cloth.

CAUTION Do not store the device in the foam or case while the DC power adapter is plugged in; this may cause damage to the power cord and to the device.

CAUTION Do not leave the device in excessive heat or in direct sunlight. High temperatures can cause the device to malfunction.

CAUTION When plugging the DC power connector into the device, do not force the power connector into the device; this may cause damage to the device, which will not be covered under warranty.

CAUTION Do not push or scratch the touchscreen display with stiff or rigid objects. This may cause damage to the device. A stylus is acceptable for use with the device.

Note If the pupils are too small, the vision screener will notify you on screen to adjust the lighting in the room. For best results, subject’s pupils should be 5mm or greater.

Note The power cord set may not be used with any other equipment other than the Welch Allyn Spot Vision Screener VS100.

</tr>
</tbody>
</table>
Security

Helps you set a security PIN for your device. If enabled, a PIN is required whenever you start the device or upon waking it.

Web Services

Enables Web server and web services API
Setting up the vision screener

Contents Checklist

The main shipping box contains the vision screener, Directions for use, and the Accessory box.

The Accessory box contains:
• AC Power Cord
• Power Supply/Charger
• Cleaning Cloth
• Cable Straps

Note Please do not discard the box and foam. Damages incurred by shipping the device in non-approved packing material voids the limited warranty. (See Warranty for details.)

To charge the vision screener

Charge the vision screener for 4 hours before first use. When the battery reaches a very low level, the screen displays a notice to insert the power cable. If the power cable is not inserted, the device automatically shuts down.

1. Connect the power cord to the power supply.

2. Locate the power connector on the vision screener and connect the power supply.
CAUTION Do not force the power connector on the power supply into the vision screener. Using force can damage the device and voids the warranty. The power connector on the power supply easily inserts into the vision screener.

3. Plug the power cord into an available wall outlet to charge the vision screener.

To turn on the vision screener

To turn the vision screener on, press and release the Power button. After the start-up process completes (in approximately 30 seconds) the Home screen appears. The first time you turn on the vision screener, the device guides you through selecting the language and setting the date and time.

<table>
<thead>
<tr>
<th>If the power indicator light is...</th>
<th>The vision screener is...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flashing green</td>
<td>Charging</td>
</tr>
<tr>
<td>Steady green</td>
<td>Fully charged</td>
</tr>
<tr>
<td>Not turned on</td>
<td>Not plugged in to a power supply</td>
</tr>
</tbody>
</table>

After one minute without activity, the screen dims. After five minutes without activity, the screen turns black to conserve battery power. To activate the device, tap the screen or press the Power button. If the screen does not light up, plug in the power cord and try again.
To set the language

1. From the Home screen, touch **Tools**, and then **Language**.
2. Touch the radio button next to the desired language. By default, the selected language is English.
3. To return to the Tools screen, touch the arrow in the upper-right corner.

To set the system clock

The system clock displays in the upper right-hand corner of the Home screen.

1. From the Home screen, select **Tools**, and then **Date/Time**.
2. Next to Time or Date, select **Edit**.
3. Delete the current setting, and then update.
4. Touch **OK**.
5. If desired, reset the Date Format.
6. To return to the Tools screen, touch the arrow in the upper-right corner.
Screening subjects

Before screening a subject

If the pupils are too small, the vision screener displays a notification to adjust the lighting in the room. Follow these steps to encourage the subject’s pupils to dilate to 5 mm or greater.

1. Dim the lights, if possible.
2. Close blinds or curtains, if possible.
3. The subject’s back should be positioned to the interfering light source.
4. Avoid direct light into the subject’s eyes from:
   • ambient light sources
   • exterior light
   • incandescent and halogen lights (fluorescent light is the best testing environment, if options are limited)
Subject Information screen

You can use the Subject Information screen to enter or verify the subject’s data. Date of Birth (or Age) is the only required field. This field displays with a red background if the date of birth (or age) is blank or invalid, or if the subject’s age is under 6 months or over 100 years.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subject ID</td>
<td>Consists of a maximum of 30 characters, letters and numbers.</td>
</tr>
<tr>
<td>First name</td>
<td>Consists of a maximum of 20 characters, letters only.</td>
</tr>
<tr>
<td>Last Name</td>
<td>Consists of a maximum of 20 characters, letters only.</td>
</tr>
<tr>
<td>Date of Birth</td>
<td>Enter a date of birth in the specified format (MMDDYYYY or DDMMYYYY) or enter the age and touch Months or Years. (Required)</td>
</tr>
<tr>
<td>Eyewear prescription</td>
<td>Allows you to select None, or Glasses, or Contacts. If this field is left blank, None is selected.</td>
</tr>
<tr>
<td>Gender</td>
<td>Allows you to select Male or Female. If this field is left blank, no gender is specified.</td>
</tr>
<tr>
<td>OK</td>
<td>Confirms any changes.</td>
</tr>
<tr>
<td>Go</td>
<td>Begins the screening.</td>
</tr>
</tbody>
</table>

To screen a subject

If the vision screener has a location specified, the name of the location is displayed on the top left of the screen in parentheses. If there is no location specified, and you want a location included in the screening information, on the Home screen touch Tools, and then touch Location to specify the screening location.

Completed exams are saved automatically.

1. Turn on the vision screener.
   The Home screen appears.
2. Stand approximately 3 feet (1 meter) from the subject with one foot ahead of the other for stability.
3. Hold the vision screener on an even plane with the subject’s eyes.
4. Touch **Start** and enter the subject information. The subject’s age or date of birth is required.

5. Touch **Go**.

   The screening begins immediately. The vision screener emits the sound of chirping birds. This sound is intended to focus the subject’s attention on the device. Touch the Loudspeaker icon to mute the device.

6. Keep the vision screener steady until the screening wheel appears, indicating the capture process is underway.

   The Subject Results screen appears at the end of the screening process.

7. If desired, touch **Edit** to add additional subject information. When finished, touch **OK** twice.

8. To exit the Subject Results screen, touch **Home**.

   Results are saved automatically.

9. If you encounter difficulty:
   - If you see a blue screen, the vision screener is either too close or too far from the subject. Move forward or backward as needed.
   - If the subject’s pupils are too small, the vision screener displays a message to adjust the lighting in the room. A darker environment promotes larger pupil size.
   - If the device is capturing other objects or taking a long time to start screening, make sure the vision screener on a level with the subject’s eyes.
   - Avoid pointing the vision screener too high, which encourages the subject to look upward.

10. If you are unable to capture the subject’s pupils with a successful screening, the screening cycle stops. You can:
   - Retry the screening.
   - Flag the record.
   - Try using monocular mode.
   - Return to the Home screen

   The Troubleshooting section provides additional suggestions to ensure a successful screening.

Once finished, you can export the files to a USB flash drive to easily scan the results on a computer. Individual screening results are saved in the pdf subfolder. A list of all the screening results is saved under the db subfolder.
Note

Do not allow the device storage to become 100% full. For best results, when the device has accumulated 300 records, delete all records from the vision screener. Verify you have successfully exported all desired records to a USB flash drive before you select Clear All.
The Subject Results screen

The Subject Results screen appears at the end of the screening process.

Screening results provide an output that is either in- or out-of-range. A statement displays on the device, such as "Screening Complete" or "Complete Eye Exam Recommended." The message is intended to prompt the caregiver to assess whether the subject should be referred to an eye care specialist for further evaluation. Results that are out-of-range are indicated in red.

The figure below outlines the Subject Results screen:

<table>
<thead>

</tr>
</tbody>
</table>
Configuring the Screen Results screen

1. To select or change viewing options, touch **Tools** and then **Results**.
2. To select an option, touch the radio button next to it.
3. To return to the Tools screen, touch the **X** in the upper-left corner.

To screen in monocular mode

In monocular mode, you can choose which eye to screen. Use this mode when binocular screening does not capture the subject’s pupils.

**After a binocular screening completes:**

1. At the end of the binocular screening process, touch **Mono**.
2. To select the subject’s eye to screen, touch the corresponding side of the screen. (OD = subject’s right eye; OS = subject’s left eye).
3. To repeat the process with the subject’s other eye, touch **Mono** from the Subject Results menu.

**If a measurement times out:**

1. If a measurement times out after an unsuccessful binocular screening, touch **Mono**.
2. To select the subject’s eye to screen, touch the corresponding side of the screen. (OD = subject’s right eye; OS = subject’s left eye).
3. To repeat the process with the subject’s other eye, touch **Mono** from the Measurement Options menu.

Overview: Conducting a mass screening

If you set up a subject list ahead of time, you can screen several individuals quickly without having to stop to add additional information.

**Note** For best results, when the device has accumulated 300 records, delete all records from the vision screener. Verify you have successfully exported the records to a USB flash drive before you select Clear All.

The following is an overview of the steps involved in screening multiple subjects.

1. Export the .csv files from the vision screener to a USB flash drive. For more information, see Import/Export.
2. Insert the flash drive in a computer, add the subject information to the SpotSubjects.csv file. Save this file at the top level of the flash drive (not in a folder). For more information, see Create a subject list.
3. Import the files back to the vision screener. For more information, see Import.
4. On the vision screener, touch **Queue** to bring up the subject list.
5. Select the subject you want to screen. If needed, modify the subject information. For more information, see To screen a subject.
6. Touch **Go**.
7. When the screening is completed, touch **Home**.
8. Repeat steps 4-7 until you have screened all the subjects.
Once finished, you can export the files to a USB flash drive to easily scan the results on a computer. Individual screening results are saved in the pdf subfolder. A list of all the screening results is saved under the db subfolder.

To delete records

⚠️ CAUTION Verify you have successfully exported desired data to a USB drive before you select Clear All. Clear All deletes all the records on the device, including any subjects in the queue or the subject list.

1. From the Home screen, touch Queue or History.
2. Touch Clear All.
3. Touch Delete.
Advanced settings on the vision screener

Before configuring network security

If the device is configured with your organization’s wireless network settings, you can view screening results on a computer. If you want to print screening results, you can connect the device to a USB printer or you can add a wireless network printer.

Wireless networks use security to protect your information. Your organization’s system administrator can supply you with any security information needed to access the network.

Before you can connect the device to a network, you need the following:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSID</td>
<td>The name of your wireless network.</td>
<td>This name can consist of letters or numbers or a combination of both, up to 32 characters.</td>
</tr>
<tr>
<td>Passphrase</td>
<td>A passphrase, or password, is used to protect the privacy of your wireless network.</td>
<td>The format of the passphrase or password depends on which security type you select.</td>
</tr>
<tr>
<td>Network Security Type</td>
<td>None</td>
<td>If this option is selected, the connection to the wireless network is not encrypted and any information sent or received on this network is not necessarily confidential.</td>
</tr>
<tr>
<td>WEP</td>
<td></td>
<td>The WEP passphrase must be either 5, 10, 13, or 26 characters.</td>
</tr>
<tr>
<td>WPA/2 PSK</td>
<td></td>
<td>The WPA/2 PSK passphrase must be between 8 and 64 characters.</td>
</tr>
<tr>
<td>WPA/2 EAP-PEAP</td>
<td></td>
<td>The WPA/2 EAP-PEAP username and the password must be between 1 and 64 characters.</td>
</tr>
</tbody>
</table>

All of these fields are case sensitive. By default, the first letter you type in these fields is uppercase. To type the first letter in lowercase, touch the Up arrow repeatedly until the arrow displays as a dark arrow with a white outline.
Connecting a device to the network

1. Touch Tools, and then touch Network.
   If the device is already configured with network settings, these display on the bottom of the screen.
2. If the settings are correct, touch the X in the upper-left corner to return to the Tools screen.
3. To connect a device to the network, add the network name (SSID) and security type. For details, see the following sections.

To add/change the network name (SSID)

1. Touch within the SSID Name field.
   The keyboard appears.
2. Enter the SSID (case sensitive network name).
3. Touch OK to save your changes and return to the previous screen.

To add/change the security type

1. Use the radio button to select the security type: WEP, WPA/2 PSK, or WPA/2 EAP-PEAP.
2. Touch Passphrase.
   The keyboard appears.
3. If you selected WPA/2 EAP-PEAP, enter the username and then select OK.
4. Enter the passphrase (or password) for your organization’s network, and then select OK.
5. On the Network screen, select OK to save the changes.

</tr>
</tbody>
</table>

To enable or disable the wireless capability on the vision screener

**Note** If you disable the wireless capability, you must re-start the vision screener to enable it again.

2. Touch Enable or Disable.
To configure network IP settings

1. Touch TCP/IP.
   The network address and settings display on the screen.
2. To manually configure the network IP configuration, touch Static. When finished, touch OK.
3. Touch OK to save the changes and return to the previous screen.

Printing

To print screening results, you must connect the vision screener to a printer on a wireless network or connect to a printer using a USB cable. Set the printer you want to print to as the default printer. The vision screener is capable of printing to most wireless network printers. However, it is not guaranteed that every printer works with the vision screener.

The Available Printers screen displays all the printers that have been added to the vision screener. For most printers, all you need to do to print is select the printer from the Add Printers screen, add it to the Available Printers screen, and set it as the default printer. For more information, see To add a printer.

Some printers need you to select a print driver before you can set it as the default printer. Print drivers help the printer to print your content in the correct format. If your printer does not have a print driver associated with it, you need to tell the vision screener which driver to use. For best results, select a print driver that matches the series number of the printer. If the printer series is not listed, select a generic print driver that best matches the type of printer you are using. The vision screener contains generic PCL drivers that can be used with older printers, as well as a custom driver for label printers. For more information, see To select a print driver manually.

If you do not see the printer you want on the Add Printers screen, you need to add the printer manually, which requires you to add the printer’s location and other details as well as selecting a print driver. For more information, see To add a printer manually.

Note
In order to install the QL-820NWB on the vision screener, it must have QL-820 in its name on the network and you must select the driver labeled QL-820NWB from the driver list. Use Brother DK2205 Continuous Length Paper Tape or equivalent.

To add a printer

For most printers, all you need to do is add the printer to the Available Printers screen and set it as the default printer. If a default printer has already been set, it displays first. An icon next to each printer indicates the type of connection.

1. If adding a USB printer, connect the USB cable from the printer to the vision screener’s USB port. If adding a network-connected wireless printer, make sure the vision screener has been added to the wireless network.
2. Touch Tools, and then touch Printer.
   The Available Printers screen displays all the printers that have been saved on the vision screener.
3. Touch Plus.
The Add Printers screen appears.
4. If you do not see the printer you want to add, touch Refresh.
The list of printers may take a moment to update.
5. Select the printer.
   If you do not see the printer on the Add Printer screen, see To add the printer manually.
6. Touch Save.
   The printer is automatically set as the default printer.
7. If the Save icon does not appear, see To add a print driver manually.
8. To verify that the printer is installed correctly, touch Print test page.
9. If the test page does not print correctly, refer to the Troubleshooting section.

To select a print driver manually

Most printers can be added by selecting them from the Add Printers screen and saving them. If you can select a printer but not save it, you need to select a print driver. If you do not see the printer on the Add Printer screen, you need to add the printer manually.

1. If adding a USB printer, connect the USB cable from the printer to the vision screener’s USB port. If adding a network-connected wireless printer, make sure the vision screener has been added to the wireless network.
2. Touch Tools, and then touch Printer.
   The Available Printers screen displays all the printers that have been saved on the vision screener.
3. Touch Plus.
   The Add Printers screen appears.
4. If you do not see the printer you want to add, touch Refresh.
   The list of printers may take a moment to update.
5. Select the printer.
   If you do not see the printer on the Add Printer screen, see To add the printer manually.
6. Touch Next
7. Touch the Driver field and select the driver.
8. Touch Save.
   The printer is automatically set as the default printer.
9. To verify that the printer is installed correctly, touch Print test page.
10. Touch X to return to the previous screen.
Before adding a printer manually

If you need to add a printer manually, consult your local system administrator for the following information about the printer location.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

<td>The default port is 631.</td>
</tr>
<tr>
<td>Raw Socket</td>
<td></td>
<td>The default port is 9100.</td>
</tr>
<tr>
<td>Resource Path</td>
<td>Available when IPP is the selected protocol.</td>
<td>The maximum length is 40 characters. For allowed characters, see Hostname. The default value is ipp/print.</td>
</tr>
</tbody>
</table>

To add a printer manually

If the vision screener cannot discover a printer, you must add it manually. The printer does not need to be connected to the wireless network when you add it to the vision screener. The vision screener will print to the printer when it is connected.

1. Touch **Tools**, and then touch **Printer**.

   The Available Printers screen appears.
2. Touch **Plus**.
   The Add Printer screen appears.

3. If you do not see the printer you want to add, touch **Refresh**. If the printer still does not appear, touch **Other**.
   The Printer Details screen appears.

4. Touch and edit the Name, Location, and Driver fields.
   a. **Name**: The name can consist of any printable character except for Tab, a blank space, the question mark (?) or hash tag (#) characters.
   b. **Location**: Enter the printer location. For more information, see Before adding a printer manually. If you do not know the printer location, consult your system administrator.
   c. **Driver**: Select the driver from the list.

5. To verify that the printer is installed correctly, touch **Print test page**.
   If the test page does not print correctly, refer to the Troubleshooting section.

6. Touch **Save**.
   The printer is automatically saved as the default printer.

7. Touch X in the upper-left corner of the screen to return to the previous screen.

**To change printer settings**

1. On the Available Printers screen, select a printer.

2. Perform one of the following:
   - To view the number of print jobs, touch **Edit**.
   - If you need to change a particular setting, touch the field.
   - To delete a printer, touch **Minus**.
   - To set the printer as default, touch **Set as default**.

3. Touch X in the upper-left corner of the screen to return to the previous screen.

**To reset the printer system**

Resetting the printer system deletes all currently saved printers.

1. On the Available Printers screen, touch **Clear All**.

2. A pop-up appears; touch **Delete**.
   All current printer configurations are removed.

   Before you can print, you need to add a printer and set it as the default printer.

**About importing and exporting**

You can import a subject list and a customized banner file to the device as well as a customized criteria file. The banner file must be in the graphic .png format and the other files must be in the .csv format.

A .csv file is a text file that has information separated by commas. For example: "First Name, Last Name, Age". Files in a .csv format can be opened in a spreadsheet program,
which makes it easier to view the information. You can create a .csv file in a spreadsheet or text program. The file must have a .csv suffix.

The vision screener comes with a template and sample .csv files. You can export these files to your computer to add information about the subjects to be screened and then import the files into the vision screener before beginning the screening.

When you first export files from the device, two folders appear on the USB drive. Open the folder with the format “Spot_SerialNumber_YYYYMMDD_HHMMSS”. For example, Spot_19719_20180920_152020.

The exported folder contains the following .csv files:

<table>
<thead>
<tr>
<th>.csv File</th>
<th>Location</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SpotResults</td>
<td>db subfolder</td>
<td>This file contains the basic screening results. When you first export this file to a computer, it contains only the header row. When you screen subjects and export to a computer, this file is filled with the test results.</td>
</tr>
<tr>
<td>SpotResultsExtended</td>
<td>db subfolder</td>
<td>This file contains the basic screen results as well as more in-depth results. When you first export this file to a computer, it contains only the header row. When you screen subjects and export to a computer, this file is filled with the test results.</td>
</tr>
<tr>
<td>SpotSubjects</td>
<td>db subfolder</td>
<td>This is a template that you can use to create a subject list. For more information, see Create a subject list.</td>
</tr>
<tr>
<td>SpotCriteria</td>
<td>import subfolder</td>
<td>This file contains the Vision Screener criteria. Before modifying the criteria, see Vision screener criteria. Note: this folder also contains a SpotCriteria.default file. This file is not modifiable.</td>
</tr>
</tbody>
</table>

Importing/exporting files

Importing or exporting files requires a USB storage device. The recommended device size is 16 GB or larger.

⚠️ **CAUTION** If the USB drive is removed before the export is finished, the information might not be completely transferred or it might become corrupted.

Export

When you export a file, it is saved on the USB drive in a folder named with the device serial number and timestamp. Each time you export, a new folder is created with this format: Device-Name_Serial-Number_YYYYMMDD_HHMMSS.

For example, the first time you export to the USB drive, the exported files could be in a folder named Spot_19719_20180911_110449. The next time you export to the USB
drive, the most recently exported files are in a folder with a later timestamp, such as Spot_19719_20180920_152020

1. Select **Tools** and then **Import/Export**.
2. Touch **Export**.
3. To export one file containing no subject-specific data, touch **Exclude Personal Data**. If you do not choose this option, then all data is exported.
   - The first time you export files, the files contain only column headings, with no personal data.
4. Touch **Export** again to begin the export process.
5. When the device displays a successful export notification, touch **OK**.

   **Note** You can now safely remove the USB drive from the vision screener.

### Create a subject list

A subject list allows you to screen subjects quickly, without having to enter their information before each screening. You can expedite the process of conducting a mass screening if you have prepared a subject list before the screening.

You must export the SpotSubjects.csv file to a USB flash drive before you can update it on your computer. After you import the updated list into the vision screener, the subject information displays in the queue. When you select a subject and complete the screening, the subject’s information disappears from the queue and is added to the list of completed screenings in the SpotResults.csv file. Individual results appear in the pdf subfolder.

1. After exporting the .csv files to the USB flash drive, insert the flash drive in your computer.
2. Go to the folder with the latest timestamp.
3. Select the db subfolder.
4. Open the SpotSubjects.csv file in a spreadsheet or notepad program.
5. Add the subject information. Do not modify the column names.

   **Note** If you are not sure how to fill out the subject information, refer to the Subject Information Screen. You must enter a date of birth or age in a valid format. For example: 5/24/1963, 8 months, or 5 years. If you do not enter the subject’s date of birth or age in a valid format, the vision screener cannot import the file. If you do not fill out the other fields in the correct format, the vision screener leaves those fields empty when it imports the file.

6. Save the file as a .csv file. Give the file one of the following names:

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MyLocation.csv</td>
<td>Use the name of the location where the screenings will take place. For example, if you are conducting screenings in Beaverton, name the file Beaverton.csv. The vision screener automatically fills in the location</td>
</tr>
<tr>
<td>Name</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>SpotSubjects.csv</td>
<td>Use this name if the location is already specified on the vision screener. If no location is specified on the device, the location is not included in the results.</td>
</tr>
</tbody>
</table>

7. Move the file to the top level of the folder structure. For example, if your USB drive shows upon your computer as the D:/ drive, save the .csv file as D:/spotsubject.csv or D:/mylocation.csv.

You can now import the file to the vision screener.

**Import**

Before you import a file, make sure it is on the top-level of the USB drive. You cannot import files that are in folders.

1. Insert the USB device into the USB port of the vision screener.

2. Select **Tools** and then **Import/Export**.

   Once the USB device is detected, Import and Export become available for selection and the USB symbol displays in the upper right black bar next to the wireless connectivity symbol. The number of import files found appears on the screen.

   **Note** Import is only available if the vision screener recognizes a valid import file. If there are no files in the top-level of the USB drive, Import is not available.

3. If Import and Export do not highlight within five seconds of inserting the USB drive, remove the USB, insert it into your computer and remove all files from the drive. Recreate or recopy the files you want to import onto the drive.

4. Touch **Import**.

5. To return to the previous screen, touch the **X** in the upper-left corner.

**Custom banner**

Welch Allyn offers the ability to add a custom banner to the bottom of the printable reports. Create your banner using the specifics below:

- Banner files must be named **banner.png**
- No larger than 1MB
- Image must be 1376 x 240 pixels

**To add a custom banner**

1. Place the banner.png file on the root/top-level directory of the USB.

2. Insert the USB in the vision screener. Touch **Tools**, and then touch **Import/Export**.
3. Once import file option highlights, touch **Import**.
4. To verify that the file was imported successfully, screen a new subject, or select a completed screening and print the report. Your new banner prints on the bottom of the report.

**Web access**

When connected to a wireless network, the vision screener gives you the ability to view files from a web browser (for example, Internet Explorer, Firefox, Safari,) on a computer on the same network.

**To access the webserver on the vision screener**

Make sure your computer and the vision screener are on the same network.

1. From your computer, open a web browser.
2. Enter the vision screener IP address in the address bar, for example 123.45.67.89. The IP address is located on the top black bar on the Home screen.
3. If the web browser displays a security warning, proceed.
4. Enter the username and password.
   
   **Username:** `spot`
   **Password:** `0000`

   **Note** If you have enabled security on your device, the password is your four-digit pin code.

5. To view the exam results of each individual screening, select the pdf folder.

**Vision screener criteria**

Spot Vision Screener’s criteria was developed in accord with the American Academy of Pediatric Ophthalmology and Strabismus (AAPOS) and American Academy of Pediatrics (AAP) recommendations for instrument based vision screening. The criteria is age specific to assist with early detection of amblyopic risk factors in children.

**Note** Any deviation from this criteria may lead to inaccurate readings. If you enter criteria that is not within accepted limits, the vision screener automatically restores the system default criteria.

- The subject age in months shall have no overlapping ages between the age ranges.
- No subject age range can span 240 months (20 years).
- Anisometropia Threshold Value(age): Range 0.25D to 14.00D in increments of 0.25 diopters.
- Myopia Threshold Value(age): Range -7.00 to +0.00 diopters in increments of 0.25 diopters.
- Hyperopia Threshold Value(age): Range 0.00 to +7.00 diopters in increments of 0.25 diopters.
- Astigmatism Threshold Value(age): Range 0.25D to +3.00D in increments of 0.25 diopters.
- Anisocoria Threshold Value(age): Range 0.00 to +5.00 mm in increments of 0.10 mm.
To modify current screening criteria

1. Perform an export and insert the USB flash drive into your computer.
2. Go to the USB drive folder and open the Spot folder with the most recent timestamp. Select the import subfolder.
3. Copy the SpotCriteria.csv file to the top level on the USB drive. The file cannot be within a folder. Once copied, open the file.
4. Make any desired changes using a spreadsheet or notepad program.
5. Save file as a Comma Separated Value (.csv) file. Do not change the file name. Eject the USB drive from your computer and insert into the vision screener.
6. Touch Tools, and then touch Import/Export.
7. Touch Import to import the updated criteria file.
8. To verify the file was imported successfully, touch Tools, and then touch Criteria. Review the new settings.
9. To revert to the default criteria that was shipped with the device, touch Restore twice.

   The custom criteria is deleted from the vision screener and the default criteria is restored.

About licensing

To use the screening functionality of the vision screener, the device needs to be licensed. If your device came new from the factory with this Directions for use, your license is already installed and active. If you encounter an issue with the license, contact Welch Allyn Support at customerservice@welchallyn.com

To enable/disable security on the vision screener

If you want to prevent unauthorized access, you can enable security on the vision screener by adding a four-digit security PIN code

CAUTION If you create a security PIN, you cannot disable security on the device without the PIN. If you lose or forget the PIN, contact customer service. The device must be restored to factory settings. Any data on the device will be lost.

1. Touch Tools, then touch Security.
2. Check Use security PIN code.
3. Enter and then re-enter the security PIN code.
4. To disable security, touch Tools, then touch Security.
   Uncheck Use security Pin code.
5. Enter the security PIN code.
6. To return to the previous menu, touch the X in the upper-left corner of the screen.
To lock/unlock the vision screener

1. To lock the vision screener, hold down the **Power** button.
2. Touch **Lock**.
   A Lock symbol appears on the screen.
3. To unlock the vision screener, touch 🗝️.
   A number screen appears.
4. Enter the security PIN code.

To check the storage capacity

If the storage capacity is 100% full, the vision screener stops working until you delete records from the device.

1. From the Home screen, touch **Tools**, and then **About**.
   The storage displays in the upper-right corner.
2. To return to the Tools screen, touch the ✗ in the upper-left corner.
Maintenance and cleaning

Cleaning the vision screener

**WARNING** Electric shock hazard. Before cleaning the vision screener, disconnect the DC power cord from the power outlet and the vision screener.

**WARNING** Liquids can damage electronics inside the vision screener. Prevent liquids from spilling on the vision screener.

If liquids are spilled on the vision screener:
1. Turn off the vision screener.
2. Disconnect the power plug.
3. Dry off excess liquid from the vision screener.

If liquids possibly entered the vision screener, remove the vision screener from use until it has been properly dried, inspected, and tested by qualified service personnel.

Clean on a routine basis according to your facility’s protocols and standards or local regulations.

The following agents are compatible with the vision screener:
- 70 percent isopropyl alcohol
- 10 percent chlorine bleach solution

**Note** Disinfect according to your facility’s protocols and standards or local regulations.

Cleaning with 70 percent isopropyl alcohol

Wipe the vision screener with a clean cloth slightly dampened with 70 percent isopropyl alcohol.

Cleaning with 10 percent chlorine bleach solution

1. Wipe the vision screener with a clean cloth slightly dampened with a 10 percent bleach and water solution. Follow the cleaning agent manufacturer’s guidelines.
2. Rinse with a clean cloth slightly dampened with water that meets EP and USP quality standards.
3. Allow the vision screener surface to dry for a minimum of 10 minutes before using the vision screener.

**Storing the equipment**

When storing the device, cords, and accessories, observe the environmental storage conditions that are identified in the product specifications.

If the vision screener has not been used or charged in 5 months, the battery clock might become depleted. Turn on and charge the vision screener. Check the system clock and if necessary reset the date and time. If the device has not been used or charged in 18 months, charge the device overnight, while the device is turned on, before using. For best results, use and charge the vision screener regularly.

**Disposing of electronic equipment**

This product and its components must be disposed of according to local laws and regulations. Do not dispose of this product as unsorted municipal waste.

For more specific disposal or compliance information, see www.welchallyn.com/weee, or contact Welch Allyn Customer Service.

This device contains Lithium ion cells and other electronic materials. Please contact your local government authorities for proper electronic waste recycling or disposal methods at end of life.
Troubleshooting

System restart

1. To restart the vision screener, press and hold the Power button until a confirmation screen appears. Touch Confirm to turn off the vision screener.
2. When the screen turns black, wait 30 seconds and then press the Power button to turn the vision screener back on. Ensure the device has power by plugging in the power cord.

System freeze

If the vision screener locks up and is unresponsive to touch, you need to perform a hard system reset.

⚠️ CAUTION This may cause some data loss (such as printer configuration and subject data).

1. Press the Power button.
2. Once the Power Off window appears, touch Confirm to turn off the device.
3. If the Power Off window does not appear, press and hold the Power button until the screen goes black, then release the button.
4. Wait about one minute, and then perform the normal start-up process.

Screening Issues

Accommodation or dilation

If you experience difficulty screening a subject, verify that the subject is not having issues with accommodation or dilation.

Accommodation

Accommodation is the automatic adjustment of the focus of the eye by flattening or thickening of the lens. Accommodation occurs when the subject fixates on the vision screener. This improves vision for hyperopia (farsighted) subjects.

To reduce the possibility for a subject to accommodate:
1. Once the subject is seated, have the subject close his or her eyes for 10 to 15 seconds to encourage dilation.
2. Position the vision screener on the same plane with the subject’s eyes.
3. Activate the screening seconds before the subject opens his or her eyes.
4. Ask the subject to open his or her eyes to obtain quick capture, prior to the subject’s eyes readjusting to the lights.

Dilation

Dilation is the expansion of the pupils. The vision screener cannot screen the subject if the pupils are not dilated adequately. The vision screener displays a “Pupils too small” message if the following occurs:
- The pupils are constricted below 4 mm.
- The subject has something impeding the vision screener’s infrared light source, such as blindness in one eye, cataract, or media opacity.

To encourage dilation:
1. First attempt recommendation.
   a. Once the subject is seated, have the subject close his or her eyes for 10-15 seconds.
   b. Position the vision screener on an even axis with the subject’s eyes.
   c. Activate the screening seconds before the subject opens his or her eyes.
      Ask the subject to open his or her eyes, which allows for a quick capture before the subject’s eyes readjusts to the lights.
2. Second attempt recommendation.
   a. Have the subject use his or her hands to shield his or her eyes, or use a book or magazine to shield his or her eyes.
3. Third attempt recommendation.
   a. Have the subject wear non-prescription sunglasses to shield light, or use sunglasses that wrap to block light from his or her eyes.
4. Final recommendation.
   a. Try new, darker environment and repeat the above recommendations.
   b. Turn the device out of view from the subject and reactivate the screen while rotating the device back to the subject.
Printer issues

Check that your printer is turned on and has sufficient ink or toner.

1. Print a test print page directly from the printer.
2. After you confirm your printer is in proper working order, verify the printer is on a local network by printing to the printer from a computer on the same local network.
3. If all of the above are in working order, restart the vision screener.
4. If you are having a problem with your printer or a print job is stuck in the queue, touch Tools, and then Printer. Select the printer and touch Pencil, then touch Reset. This clears any print jobs in the queue and resets the printer.
5. If you are using a network that doesn’t support or enable multicast DNS, you need to configure the printer information. For more information, see To add a printer manually.

Wireless issues

If you encounter problems connecting to a wireless network:

1. Verify all network settings are entered correctly.
2. Check the Home screen to see if your network name and IP address are identified in the upper left corner of the black bar.
3. If the settings are correct, check the Wireless icon in the upper right corner. If the icon is red, try restarting the vision screener.
4. If the connection does not automatically reconnect, touch Tools, and then Network.
5. Touch Security Type, reselect the correct security type (None, WEP, WPA/2 PSK, and WPA/2 EAP-PEAP), re-enter the username (if required) and password or passphrase. Select OK.

For more information on troubleshooting or error messages, contact Welch Allyn Technical Support: [www.welchallyn.com](http://www.welchallyn.com).
Specifications

The vision screener has the following characteristics:

- This vision screener DFU document is valid for software versions 3.1.xx.yy.
- The vision screener has been calibrated as part of the manufacturing process and does not require calibration henceforth.
- The external power supply/charger supplied is a Class II equipment and the vision screener is also a Class II equipment when connected to the external power supply/charger.
- The vision screener is internally powered by equipment (battery) when not connected to the external power supply/charger.
- Protection against electric shock, no applied part.
- The vision screener is rated IPX0 and thus not protected from the ingress of water.
- The vision screener is not suitable for use in the presence of a flammable anesthetic mixture with air or with oxygen or nitrous oxide.
- The vision screener is suitable for continuous operation.
- The vision screener quickly and easily detects vision issues across all age groups starting at 6 months.
- Welch Allyn suggests a battery replacement, at an appointed Welch Allyn repair facility, every 2.5 years at the owner’s expense. The vision screener regular maintenance consists of wiping dust or dirt off the front glass surface and the LCD display as needed.

### Screening capacity

Screening results provide an output that is either in- or out-of-range, accompanied by the appropriate statement in the device output display (“Screening Complete” or “Complete Eye Exam Recommended”). The displayed message is intended to prompt the caregiver to assess whether the subject should be referred to an eye care specialist for further evaluation or simply be monitored at future screenings.

### Refraction

#### Spherical equivalent:
- **Range:** -7.50D to +7.50D in 0.25D increments
- **Accuracy:**
  - -3.50D to 3.50D, ± 0.50D
  - -7.50D to < -3.50D, ± 1.00D
  - > 3.50D to 7.50D, ± 1.00D

#### Cylindrical:
- **Range:** -3.00D to +3.00D in 0.25D increments
- **Accuracy:**
  - -1.50D to 1.50D, ± 0.50D
  - -3.00D to < -1.50D, ± 1.00D
  - > 1.50D to 3.00D, ± 1.00D
Cylindrical axis:

- **Range:** 1 to 180 degrees in 1-degree increments
- **Accuracy:** ± 10 degrees (for cylinder values > 0.5D)

Pupil size:

- **Range:** 4.0 mm to 9.0 mm in 0.1 mm increments
- **Accuracy:** ± 0.4 mm

Pupil distance:

- **Range:** 35 mm to 80 mm in 1 mm increments
- **Accuracy:** ± 1.5 mm

Screening principle: Eccentric photorefraction (photoretinoscopy) is used to estimate the magnitude of ametropia based on characteristics of the light reflex in the pupil.

**Gaze**

Corneal Light Reflex (Gaze):

- **Range:** 0.0 to 20.0 degrees in increments of 1 degree Nasal(N) or Temporal(T)
  0.0 to 20.0 degrees in increments of 1 degree Inferior(I) or Superior(S)
- **Accuracy:** ± 1.5 degrees

**EMC information**

This equipment has been tested and found to comply with the limits for a Class B digital devices, pursuant to Part 15 of the FCC Rules. This medical device equipment is suitable for use in all commercial and domestic establishments. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
The maximum wireless signal rate for the system is derived from IEEE Standard 802.11b/g/n specifications. Actual data throughput will vary. Network conditions and environmental factors, including the volume of network traffic, building materials and construction, and network overhead, may lower actual data throughput rate. Environmental conditions will adversely affect wireless signal range.

</tr>
</tbody>
</table>

where $P$ is the nominal maximum power of the transmitter output expressed in Watts (W) as specified by the transmitter manufacturer and $d$ is the recommended separation distance expressed in meters (m).

The field intensity of the fixed RF transmitters, as checked in an electromagnetic investigation of the locus, should be less than the conformity level for each range of frequency.

It is possible to have interference near devices marked with the symbol: 

![Warning Symbol]
Recommended separation distance between portable or mobile devices for radio communication and the device

The vision screener is manufactured to work in an electromagnetic environment in which the radiated RF disturbances are controlled. The operator or user of the device could prevent electromagnetic interferences by assuring a minimal distance between the portable or mobile RF communication devices (transmitter) and the device as recommended in the chart below, in respect of the output maximum power of the radio-communication devices.

<table>
<thead>
<tr>
<th>Nominal power of the transmitter (W)</th>
<th>Separation distance at the transmitter Output maximum frequency (m)</th>
</tr>
</thead>

<td>1.2</td>
</tr>
<tr>
<td>10</td>
<td>3.8</td>
</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For the transmitter with output maximum nominal power not reported above, the separation distance $d$ in meters can be calculated using the applicable equation at the frequency of the transmitter, where $P$ is the output maximum nominal power of the transmitter in Watts specified by the transmitter manufacturer.

Note 1: At 80 MHz and 800 MHz it is applicable the higher frequency range.

Note 2: This guideline may not be applicable in every circumstance. The electromagnetic propagation is affected by absorption and reflection of structures, people or objects.

FCC compliance statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

Note  This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in any environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

WARNING Changes or modifications not expressly approved by Welch Allyn could void the user’s authority to operate the equipment.
Vision Screener radio

The vision screener radio operates on 802.11 networks.

This product can be used with the following restriction(s):

France - Outdoor use is limited to 10 mW EIRP within the band 2454 to 2483.5 MHz.

Norway - Does not apply for the geographical area within a radius of 20 km from the center of Ny-Ålesund.

Note: Effective Isotropic Radiated Power (EIRP).

**General radio compliance**

The wireless features of this device must be used in strict accordance with the manufacturer’s instructions as described in the user documentation that comes with the product. This device complies with Part 15 of the FCC rules and with the rules of the Canadian ICES-003 and the essential requirements of the 2014/53/EU Radio Equipment Directive as described below.

This device complies with EN62479, RSS-102 and 47 CFR 2.1093 for RF exposure.

**Industry Canada (IC) emissions**

This device complies with RSS 210 of Industry Canada.

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of this device.

L’utilisation de ce dispositif est autorisée seulement aux conditions suivantes: (1) il ne doit pas produire de brouillage et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (EIRP) is not more than that required for successful communication.
This device has been designed to operate with an antenna having a maximum gain of 2.0 dBi. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

Pour réduire le risque d’interférence avec d’autres utilisateurs, le type d’antenne et son gain doivent être choisis afin que la puissance isotope rayonnée équivalente (PIRE) ne dépasse pas ce qui est nécessaire pour une communication réussie.

Ce dispositif a été conçu pour fonctionner avec une antenne ayant un gain maximal de 2.0 dBi. Antenne ayant un gain supérieur sont strictement interdites par la réglementation d’Industrie Canada. L’impédance d’antenne requise est de 50 ohms.

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

**European Union**

This device complies with the essential requirements of the 2014/53/EU Radio Equipment Directive. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the 2014/53/EU Radio Equipment Directive:

This device is a 2.4 GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

Service policy

All repairs on products under warranty must be performed by Welch Allyn or by a service provider authorized by Welch Allyn. Unauthorized repairs will void the warranty. In addition, whether or not covered under warranty, any product repair should be performed exclusively by Welch Allyn or by a service provider that has been authorized by Welch Allyn.

If the product fails to function properly—or if you need assistance, service, or spare parts—contact the nearest Welch Allyn Technical Support Center.

Before contacting Welch Allyn, try to duplicate the problem, and check all accessories to ensure that they are not causing the problem. When calling, please be prepared to provide:

• Product name, model number, and serial number of your product.
• Complete description of the problem.
• Complete name, address and phone number of your facility.
• For out-of-warranty repairs or spare parts orders, a purchase order (or credit card) number.
• For parts orders, the required spare or replacement part numbers.

If your product requires warranty, extended warranty, or non-warranty repair service, please call first the nearest Welch Allyn Technical Support Center. A representative will assist you troubleshooting the problem and will make every effort to solve it over the phone, avoiding potential unnecessary return of your product.

In case a return cannot be avoided, the representative will record all necessary information and will provide a Return Material Authorization (RMA) number, as well as the appropriate return address. An RMA number must be obtained prior to any return.

If you have to return your product for service, follow these recommended packing instructions:

• Remove all hoses, cables, sensors, power cords, and other accessories (as appropriate) before packing, unless you suspect they are associated with the problem.
• Wherever possible use the original shipping carton and packing materials.
• Include a packing list and the Welch Allyn Return Material Authorization (RMA) number.

It is recommended that all returned goods be insured. Claims for loss or damage to the product must be initiated by the sender.
**Warranty**

**Vision Screener**

Your Welch Allyn product, when new, is warranted to be free from original defects in material and workmanship and to perform in accordance with manufacturer’s specifications under normal use and service. The warranty period* begins from the date of purchase from Welch Allyn, Inc. or its authorized distributors. Welch Allyn’s obligation is limited to the repair or replacement of components determined by Welch Allyn to be defective within the warranty period. These warranties extend to the original purchaser and cannot be assigned or transferred to any third party. This warranty shall not apply to any damage or product failure determined by Welch Allyn to have been caused by misuse, accident (including shipping damage), neglect, improper maintenance, modification, or repair by someone other than Welch Allyn or one of its authorized service representatives.

* 1 (one) Year Limited Warranty

These express warranties are in lieu of any and all other warranties, express or implied, including the warranties of merchantability and fitness for a particular purpose, and no other person has been authorized to assume for Welch Allyn any other liability in connection with the sale of the Welch Allyn product. Welch Allyn shall not be liable for any loss or damages, whether direct, incidental or consequential, resulting from the breach of any express warranty, except as set forth herein.
